${ }^{1}$ North = all of Florida north of State Road 40; central = the section of Florida between State Roads 40 and 70; south $=$ all of Florida below State Road 70 .
${ }^{2}$ Use transplants (if appropriate) or buy the amount of seed needed to grow this many plants per 10 feet of row. Most seed packets state the number of seeds the packet contains.
${ }^{3}$ Days from seeding to harvest: values in parentheses are days from transplants to first harvest.
${ }^{4}$ Minimum distance between rows (when planting in rows). Row spacing can be reduced or ignored as long as plants are spaced correctly.
${ }^{5}$ Transplant ability (the ability of a seedling to be successfully transplanted): I = easily survives transplanting; II = survives transplanting with care; III = only plant seeds or containerized transplants with developed root systems.
${ }^{6}$ Rotate plant families = avoid successively planting vegetables from the same family in the same area of the garden.
